

## OBJECT CLASS

**1. Which of these class is superclass of every class in Java?**

- a) String class
- b) Object class
- c) Abstract class
- d) ArrayList class

**Answer - b) Object class**

**2. Which of these method of Object class can clone an object?**

- a) Objectcopy()
- b) copy()
- c) Object clone()
- d) clone()

**Answer - d) clone()**

**3. Which of these method of Object class is used to obtain class of an object at run time?**

- a) get()
- b) void getclass()
- c) Class getclass()
- d) None of the mentioned

**Answer - c) Class getClass()**

**4. Which of these keywords can be used to prevent inheritance of a class?**

- a) super
- b) constant
- c) class
- d) final

**Answer - d) final**

**5. Which of these keywords cannot be used for a class which has been declared final?**

- a) abstract
- b) extends
- c) abstract and extends
- d) none of the mentioned

**Answer - a) abstract**

**6. Which of these classes relies upon its subclasses for complete implementation of its methods?**

- a) Object class
- b) abstract class
- c) ArrayList class
- d) None of the mentioned

**Answer - b) abstract class**

7. What will be the output of the following Java program?

```
abstract class A
{
    int i;
    abstract void display();
}
class B extends A
{
    int j;
    void display()
    {
        System.out.println(j);
    }
}
class Abstract_demo
{
    public static void main(String args[])
    {
        B obj = new B();
        obj.j=2;
        obj.display();
    }
}
```

- a) 0
- b) 2
- c) Runtime Error
- d) Compilation Error

**Answer - b) 2**

8. What will be the output of the following Java program?

```
class A
{
    int i;
    int j;
    A()
    {
```

```
        i = 1;
        j = 2;
    }
}
class Output
{
    public static void main(String args[])
    {
        A obj1 = new A();
        A obj2 = new A();
        System.out.print(obj1.equals(obj2));
    }
}
```

a) false  
b) true  
c) 1  
d) Compilation Error

**Answer - a) false**

**9. What will be the output of the following Java code?**

```
class Output
{
    public static void main(String args[])
    {
        Object obj = new Object();
        System.out.print(obj.getClass());
    } }
}
```

a) Object  
b) class Object  
c) class java.lang.Object  
d) Compilation Error

**Answer - c) class java.lang.Object**

**10. What will be the output of the following Java code?**

```
class A
{
    int i;
    int j;
    A()
    {
        i = 1;
    }
}
```

```
        j = 2;
    }
}
class Output
{
    public static void main(String args[])
    {
        A obj1 = new A();
        System.out.print(obj1.toString());
    } }
```

- a) true
- b) false
- c) String associated with obj1
- d) Compilation Error

**Answer - c) String associated with obj1**
